# ILLINOIS MINERAL PRODUCTION

## BY COUNTIES, 1968

W. L. Busch

Illinois mineral production in 1968 set a record annual high of 670.6 million dollars in total value. This amount was 20.6 million dollars more than the previous all-time high of 650 million dollars established in 1967. The value of minerals produced in 1966, totaling 644 million dollars, was also a record high.

In 1968 the value of coal accounted for 37.2 percent, and the value of crude oil supplied 25.9 percent of the value of all minerals produced in the state. The combined value of these two fuels amounted to almost two-thirds of the state's entire mineral value for the year.

The second most valuable group of minerals produced in Illinois includes crushed stone, cement, and lime. As a group these stone products contributed 18.9 percent of the 1968 state's total mineral value.

The value of clay products reported produced in Illinois represented about 8 percent of the state's 1968 total mineral products value. Illinois clay products include face brick and common brick, structural tile, drain and sewer tile, refractories, pottery, and whiteware.

Illinois sand and gravel production in 1968 furnished about 7.9 percent of the state's mineral products value. This group of minerals includes common sand and gravel, silica sand, and some special sands.

The combined value of fluorspar, lead, and zinc produced in Illinois accounted for 2.1 percent of the state's total mineral value in 1968.

Following are brief summaries of the tables used in this report.

Table 1—Illinois Mineral Products and Major Producing Counties, 1968

This table lists the mineral products and the number of counties producing each product. Many counties throughout the state produced clay

Digitized by the Internet Archive  
in 2012 with funding from  
University of Illinois Urbana-Champaign

<http://archive.org/details/illinoismineralp27busc>

products, coal, crude oil, common sand and gravel, and stone. However, only one county in the state produced tripoli and sandstone, only two counties each produced fluorspar, lime, and silica sand, and only three counties each produced cement, lead, natural bonded molding sand, and zinc. Counties producing the various mineral products are listed in order of rank to include, when possible, the top ten producers in 1968.

Table 2—Summary of Illinois Mineral Production, 1967-1968

Table 2 gives a statistical summary of Illinois mineral production for the years of 1967 and 1968. Items listed are the mineral products produced, the amounts reported produced by commercial operators, and the total annual value for each product. The annual values of some mineral products were combined under the entry Other in order to avoid revealing the output of any one individual producer. The combined values were added to the state's total value in one figure.

Table 3—Value of Illinois Regional Mineral Production, 1962-1968

In order to show the rise or decline of mineral production in broad areas of the state, the counties of Illinois have been grouped into nine regions, as outlined on the map at the end of this report. Table 3 lists the nine regions and also shows the total value of all minerals produced by each region for each year, 1962-1968. The regional annual production figures indicate that some areas have scored steady growth over the years, other areas have remained more or less constant in the total annual value of minerals produced, and several areas trend toward declining mineral production.

Table 4—Illinois Counties Ranked According to Total Value of Minerals Produced in 1968

The rank of Illinois counties, in total dollar value of all minerals produced during 1968, is shown in table 4. Although each county holds a specific rank in the state, the position of some counties is not given to avoid disclosing certain production information. Such counties have been combined with one or two other counties in the same region. The combined total mineral production value for these counties has been listed among the individual counties in table 4. All counties in the state are accounted for in this table.

Tables 5-13—Illinois Mineral Production by County, According to Region, 1968

The value in dollars of each county's contribution to the state's total mineral production for 1968 is shown in tables 5-13. The tables, which group the counties within regions, also show the various mineral commodities produced in each county in order of importance. The regional and county outlines are shown on the map at the end of this report. In order to preserve confidential production information, some county values within regions have been combined.

TABLE 1—ILLINOIS MINERAL PRODUCTS AND MAJOR PRODUCING  
COUNTIES, 1968

Mineral product	Total number of producing counties	Producing counties in order of rank
Cement	3	La Salle, Lee, Massac
Clay products	24	La Salle, Cook, McDonough, Knox, Crawford, Kane, Du Page, Warren, Grundy, Will
Coal	24	Perry, Fulton, St. Clair, Franklin, Christian, Williamson, Randolph, Jefferson, Montgomery, Saline
Crude oil	42	White, Fayette, Wayne, Lawrence, Marion, Hamilton, Clay, Crawford, Wabash, Richland
Fluorspar	2	Hardin, Pope
Lead	3	Hardin, Jo Daviess, Pope
Lime	2	Cook, Adams
Natural bonded molding sand	3	Henry, Rock Island, Fayette
Common sand	61	Bureau, McHenry, Kane, Will, Grundy, Winnebago, Rock Island, Cook, Peoria, Lake
Common gravel	55	McHenry, Kane, Will, Grundy, Lake, Peoria, Bureau, McLean, Winnebago, La Salle
Sandstone	1	Alexander
Silica sand	2	La Salle, Ogle
Stone	61	Cook, St. Clair, Will, Livingston, Kankakee, Rock Island, Du Page, Hardin, Randolph, Vermilion
Tripoli	1	Alexander
Zinc	3	Hardin, Jo Daviess, Pope

TABLE 2—SUMMARY OF ILLINOIS MINERAL PRODUCTION, 1967-1968

Material	Unit	1967		1968	
		Quantity	Value at plants	Quantity	Value at plants
Coal - bituminous	tons	64,814,771	\$251,481,312	62,143,076	\$249,193,735
Crude oil	bbls	60,115,000	181,547,300	56,391,000	173,120,370
